I. Introduction

The science of acupuncture has been a medical science in China since 4000-5000 years ago. Many studies show ST36 acupuncture points are able to trigger the body's defense system. The development of acupuncture in Indonesia began in 1963, then on the instruction of the then minister of health (Prof. Dr. Satrio) established the research team of traditional medicine of eastern medicine and since then acupuncture practice was held officially in RS Cipto Mangunkusumo. The basic mechanisms of acupuncture stimulation are local reactions at acupuncture points by acupuncture stimulation (piezoelectric), arising inflammatory reactions and subsequent hypothalamic stimuli (endocrine reactions, neurochemical reactions, and autonomic nervous reactions) (1).

Skin injuries can be caused by various causes such as traumatic injury (mechanical, chemical, thermal, electrical) or may also be caused by blood vessel blockage (such as Buerger disease). The wound causes the loss of the skin structure to be limited to the epidermis or to the dermis even to the point of muscle. If the wound to the structure of the dermis or muscle will be accompanied by bleeding because the blood vessels are also affected. The wound becomes a port d'entry for microorganisms to enter the body, making the wound unsterile. The infection triggers the body's
